Personal help buttons with fall detection

Smart pendant-style buttons that automatically send an alarm if a fall is detected

Lifeline 319MHz and 900MHz fall detection pendants are lightweight and water-resistant, encouraging constant wear and continuous protection. This vital part of the CarePoint resident safety system alerts staff to potential falls – even if a resident is unable to press their help button. And it's one more way you can count on Lifeline to help you build a better community experience.

Features and benefits

Lightweight, water-resistant design encourages constant wear and continuous protection

Bright LED indicates that a help call has been sent

Special button design reduces accidental activations

Adjustable lanyard with breakaway feature enhances user safety

Supervised device provides notification for low-battery condition

Specifications
