Backup paging system

Failover alert redundancy

The CarePoint Essential paging system steps in if your network goes down.
At the moment of an internet disruption, paging transmitters begin sending alerts
from fixed and wearable devices to staff pagers throughout the community.
It's the higher level of certainty you need to ensure care is delivered.

Features and benefits

Provides coverage for any campus size

Covered by back up paging which allows staff to still receive alarms
in the event the network is unavailable

Customizable alarm can be configured to alert with one of 14 different
audible notifications or vibrate

Convenient to carry on a belt clip or in a pocket

Large LCD display shows four lines of text including alarm information
and any special notes – which can be critical when providing care to residents

Easy to use and maintain with user friendly interface, one-button delete
and long battery life
